

An ungrouped set of data is basically a list of numbers

## Definition Ungrouped Data

Ungrouped data is the data you first gather from an experiment or study

The data is raw — that is, it's not sorted into categories, classified, or otherwise grouped

The unorganized data obtained from direct observation are known as ungrouped data

A

C

Most people can easily interpret it

## Advantages Ungrouped Data

When the sample size is small, it is easy to calculate the mean, mode and median

It does not require technical expertise to analyze it
